Article Type: Research Paper

Publisher: **The Jethro Project**

Abstract: Team cleaning could increase productivity by more than 50%. It relies on three or more cleaning employees to perform specialized tasks. A good team cleaning programs is first created on paper, pilot tested to ensure that it is devoid of inefficient tools and equipment (Frank, 1999). Implementing team cleaning requires managerial commitment and upfront efforts, such as space analysis, workloading, acquisition of new equipment, training, and addressing personnel and union issues. The major goal of team cleaning is to improve cleaning and simplify the cleaning process. It is therefore management's responsibility to guide the organizational change by ensuring commitment, upfront efforts, tools/equipment, and assigning champions to implement the team cleaning concept.
